

+ APML Connect Pro

Complete Installation, Multi-Terminal Setup & Operations Manual

Phase 1: System Requirements & Prerequisites

- 1. **Central Host Server PC:** Windows 10/11 (64-bit), 8 GB RAM minimum (16 GB recommended), 10 GB disk space.
- 2. **Client Workstation Devices:** Any Windows PC, laptop, iPad, tablet, or smartphone on local Wi-Fi.
- 3. **Required Software:** Docker Desktop for Windows (WSL 2 backend enabled).

Installing & Verifying Docker Desktop:

- Download Docker Desktop from <https://www.docker.com/products/docker-desktop/>
- Run installer and ensure **'Use WSL 2 instead of Hyper-V'** is selected.
- Restart computer when prompted, then launch Docker Desktop.
- Verify that the whale icon in system tray turns **solid green**.

Phase 2: Windows Firewall Configuration (Wi-Fi Access)

Required to allow laptops, tablets, and mobile devices on local Wi-Fi to connect to the host server:

- 1. Open Start Menu & Search for **'Windows Defender Firewall with Advanced Security'**.
- 2. Click **Inbound Rules** (left pane) → Click **New Rule...** (right pane).
- 3. Select **Port** → TCP → Enter Ports: 3001, 3002, 3003, 5005
- 4. Select **Allow the connection** → Check Domain, Private, Public → Name: **APML Connect Pro Server**.

Phase 3: Central Server Launch & Container Stack

Open PowerShell / Command Prompt in the server folder and run:

```
cd d:\parvg\OneDrive\Desktop\reception\0_Server_Host_Setup
docker compose up -d --build
```

Container Name	Component	Port / URL
apml-connect-receptionist	Reception Desk Front-End	http://localhost:3001
apml-connect-doctor	Doctor Cabinet EMR	http://localhost:3002
apml-connect-pharmacy	Pharmacy Counter	http://localhost:3003
apml-connect-backend	Node.js API & WebSockets	http://localhost:5005
apml-connect-db	PostgreSQL 15 Database	Port 5432
apml-connect-redis	Redis 7 Memory Cache	Port 6379

Phase 4: Client Terminal Launch & Local Wi-Fi Connections

- 1. **Server Host Launchers:** Double-click desktop launchers (Launch Doctor Cabinet.exe, Launch Receptionist.exe, Launch Pharmacy Counter.exe).
- 2. **Connecting Laptops / iPads over Wi-Fi:** Find server IP using ipconfig (e.g. 192.168.1.5). Open client browser to:
 - Doctor Cabinet: http://<SERVER_IP>:3002/dashboard/doctor
 - Reception Desk: http://<SERVER_IP>:3001/dashboard/reception
 - Pharmacy Counter: http://<SERVER_IP>:3003/dashboard/pharmacy

Phase 5: Default Account Credentials

Role / Workstation	Default Login Email	Default Password
Doctor Cabinet EMR	doctor@clinic.com	123
Reception Front Desk	receptionist@clinic.com	123
Pharmacy Counter	pharmacy@clinic.com	123

Phase 6: Daily Maintenance Commands

- **Start Server:** docker compose up -d
- **Stop Server:** docker compose stop
- **View Container Logs:** docker compose logs -f
- **Hard Refresh Browser Cache:** Press Ctrl + Shift + R
